

Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

of the general organs healthy. The bird was in the "pin-feather" moult, the ensheathed new feathers of the tail being each about an inch long. Upon removing the skin covering the uropygial gland, I at once observed that the left lobe of that structure was enormously enlarged, and the cause for this was not far to seek. Some superficial inflammation or other at the apex of one of the erupting quill-feathers of the tail on that side had prevented that particular quill from coming out. As it grew, it proceeded to coil upon itself beneath the skin, until two and a half coils had formed, like the coils of the shell of some snails, the transverse diameter of the whole structure being about a centimeter and a half. Apparently the disease was of some standing and the surrounding inflammation, due to the above cause, considerable, which latter — in part at least — may have had its share in causing the death of this bird. Years ago, in my surgical practice, I had a case or two where the hair of the beard in a man behaved in a similar manner, causing an abscess to form which, in one instance, was as large as a hazel nut, the coiled-up hair inside, which gave rise to the trouble, having a length of an inch or more.— R. W. SHUFELDT, *Washington, D. C.*

Road-runner in Colorado.— In the third supplement to Cooke's list of Colorado birds (Auk, Oct., 1910, p. 412), there is a record of this species (*Geococcyx californianus*) having been taken at Shawnee (altitude 8125 feet), Platte River, Colo., March 15, 1907.

The following narrative sheds an interesting side light on the possible circumstances bringing about such an unusual record, also giving one an inkling as to what might have occurred in other startling records.

A short time ago the writer was conversing with Mr. A. T. Allen, taxidermist of Denver whose shop he frequently visits, to see if any rare or uncommon birds had been brought in to be mounted. Mr. Allen mentioned the fact that he had mounted a Road-runner which had been brought in to him by Mr. J. W. Price, of Shawnee, Colo., who had shot the bird there on March 15, 1907, this date being a matter of record in Mr. Allen's day book. It seems a fair presumption that the bird recorded by Cooke, and the one just mentioned and mounted by Mr. Allen were one and the same. About a year after Mr. Allen had mounted this particular Road-runner, a customer came into his place of business, and purchased a mounted Road-runner, saying that he lived in the Southwest, where these birds are common, and that it had not occurred to him to take one (alive or mounted) east to show his friends, until he had stopped off on business at Denver, hence his purchase of the mounted bird. Further conversation between this customer and Mr. Allen lead the former to tell Mr. Allen that he had a year previously, spent considerable time in Denver, and at that time had with him a tame Road-runner. He kept this bird with him in Denver some time, and then liberated it "up in Platte Canyon" some time previous to March, 1907.— W. H. BERGTOLD, *Denver, Colo.*
